**SERIOUSLY?**

A portrait of a man in 18th-century attire, including a red coat and a powdered wig. A white mouse cursor is pointing to the man's ear. The image is framed by a dark border.

**"CAN SLAW?"**

## MD-2018

Congratulations on your selection of the MD-2018 Metal Detector. The MD-2018 is a hand-held metal detector designed to precisely pinpoint metallic (ferrous and nonferrous) objects during treasure recovery.

The MD-2018 is intended for use in conjunction with a ground search metal detector to aid in the recovery of metallic targets. The MD-2018 has both audible and vibrating alarms to indicate the presence of metal objects. The alarms increase in intensity as the MD-2018 is moved closer to the metal target. With a pinpointing tip plus a scraping blade with side-scan capability, the MD-2018 is very effective in easily detecting even the smallest of metallic objects. An LED flashlight assists in dark and low light conditions.

The MD-2018 has an IP 66 standard waterproof rating, fully protecting it from the environment and allowing it to be washed under running water or operated in the rain. The MD-2018's durability—based on MIL STD 810 F—will provide years of reliable operation even in rugged environments.

**THAT MOMENT WHEN YOU REALISE  
YOUR METAL DETECTOR**

A man wearing a white t-shirt, blue overalls, and yellow work gloves is sitting in a deep hole he has dug in the ground. He is looking upwards with a concerned expression. A metal detector is visible on the ground to his right. The hole is filled with brown soil and some sparse green grass.

**WAS PICKING UP YOUR  
STEEL CAPPED BOOTS**

**And then I told her...**

**I'll only be out detecting for an hour!**
